### IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application. An identifier indicating the status of each claim is provided.

#### Listing of Claims

1. (Currently Amended) A diagnosing device for a stereo camera mounted on a robot, said device comprising:
  - a flat surface portion on which texture for stereo camera diagnosis is provided;
  - an attitude unit that causes said robot apparatus placed on said diagnostic mat to assume a stance suitable for obtaining an image of the diagnostic mat;
  - a creation unit adapted to create a distance image based on the image obtained by said stereo camera;
  - an image detection unit adapted to detect the flat face of said diagnostic mat from said created distance image; and
  - a measurement unit adapted to measure the flatness of said detected flat face, and verifying the performance of a stereo camera according to whether or not the flatness is great than a standard flatness.

~~an indicator disposed on said surface portion for indicating the positional relation between said robot and said surface portion.~~

2. (Canceled)

3. (Original) A stereo camera diagnosing device according to claim 1, wherein

said robot includes one or more mobile legs including a foot; and

wherein said indicator indicates a place on said surface portion where the soles of feet of said robot are placed.

4. (Original) A stereo camera diagnosing device according to claim 1, wherein said stereo camera diagnosing device has a folding structure, which becomes a flat shape exposing said surface portion at the time of unfolding said folding structure.

5. (Original) A stereo camera diagnosing device according to claim 1, wherein said surface portion includes texture within a template, which can correctly perform matching on an epipolar line in the event of a stereo camera system using template matching.

6. (Original) A stereo camera diagnosing device according to claim 1, wherein said surface portion includes texture which allows avoiding mismatching in diagnosis and calibration.

7. (Original) A stereo camera diagnosing device according to claim 1, wherein said surface portion has patterns shaded in uniform texture.

8. (Original) A stereo camera diagnosing device according to claim 1, wherein said surface portion includes calibration patterns of which geometrical shape is known.

9 - 15. (Canceled)
